The diagram illustrates the MySQL/MariaDB database structure. It shows a table with 10 columns and 3 rows of data. The columns are represented by small rectangles, and the rows are represented by larger rectangles. The text 'MySQL/MariaDB' is centered above the table, and 'DB' is to the right. The table structure is as follows:

Column 1	Column 2	Column 3	Column 4	Column 5	Column 6	Column 7	Column 8	Column 9	Column 10
1	2	3	4	5	6	7	8	9	10
1	2	3	4	5	6	7	8	9	10
1	2	3	4	5	6	7	8	9	10

[illegible]

“I just set up Pixelfed myself. I’ve got it running on a 1GB Linode. Would definitely recommend at least 2GB RAM, because mine is using swap like there’s no tomorrow.

Processor wise, one core seems to be OK. My load averages are 0.11-ish.

Linode 1 GB CPU Nanode 1 GB (\$5/mo.)  
RAM 1 GB, CPU 1 core, 25 GB

The diagram illustrates the layout of the Mastodon and PixelFed datasets. Mastodon is represented by a grid of 5 rows and 28 columns of small squares, with the label 'Mastodon' centered below it. PixelFed is represented by a grid of 4 rows and 28 columns of small squares, with the label 'PixelFed' centered below it. The two grids are positioned side-by-side, with Mastodon on the left and PixelFed on the right.
